

IIoT software

OPC UA server for the VSE: vibration monitoring 4.0

OPC server software

Open standard interface enables easy data transfer to the IT level

Easy integration of vibration monitoring into holistic digital plant and process monitoring

Simple configuration and operation without programming knowledge

Easy connection to the IT level

With the OPC UA server for the VSE, the data from the diagnostic electronics can be transferred to the IT level very easily and without in-depth programming knowledge. This makes the vibration analysis information available for software-based plant monitoring and process optimisation in higher-level systems.

A separate client is needed for the data processing.

Type	Description	Order no.
	OPC UA server for VSE diagnostic electronics	VOS050
	Licence per VSE	VOD001

Software available for download at ifm.com

System requirements

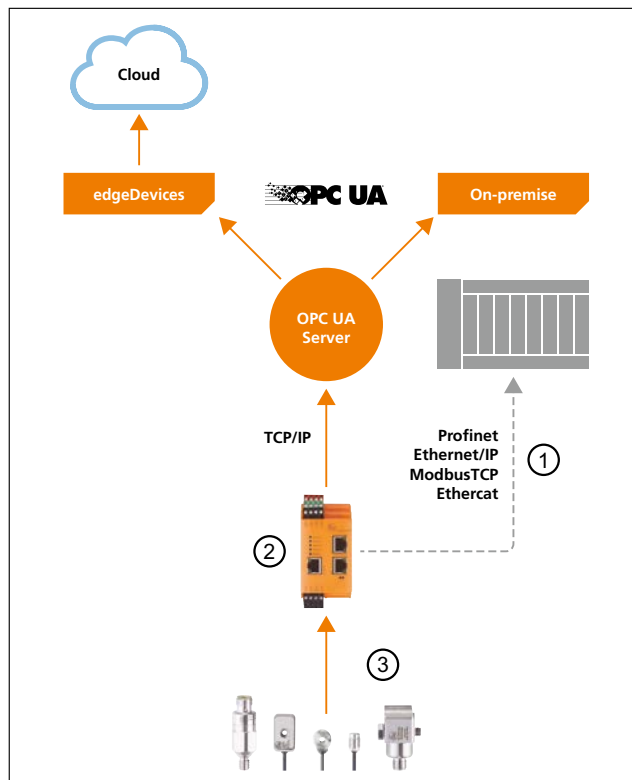

- Quadcore i5/i7
- Min. 8 GB RAM
- Windows 10 64-bit
- Windows server 2019 64-bit
- Windows server 2016 64-bit
- Net Core 3.1 Runtime (x64)

Compatible products

Type	Description	Order no.
Diagnostic electronics for accelerometers		
	8 inputs and outputs	VSE003
	16 inputs and outputs	VSE101
	PROFINET interface	VSE150
	EtherNet/IP interface	VSE151
	EtherCat interface	VSE152
	Modbus/TCP interface	VSE153

About OPC UA

OPC UA (Open Platform Communications Unified Architecture) is the manufacturer- and platform-independent communication standard for secure, reliable data communication in the Industrial Internet of Things (IIoT).

- 1) Optional fieldbus interface
- 2) VSE diagnostic electronics
- 3) Vibration sensors
