SENSOR2CLOUD TECHNOLOGY

- IO-Link sensor data is sent directly via mobile network to the cloud
- Web-based dashboard for visualisation and analysis of cloud data
- Live process values
- Data logging

Sensor2Cloud allows the collection of process data from the sensor and sent directly to the cloud without requiring any connection to a controller, PC or company network.

The Sensor2Cloud can be used to monitor and evaluate remote locations such as machinery or processes that are not connected to a company infrastructure or assets that don't even have power connected.

At ifm, we believe in working closely with our customers to customise solutions that work best for you.

Give us a call 1300 365 088 – we'd love to learn about your business and how we may help improve the efficiency of your operations.
