

Process sensors

Mechatronic flow sensors – especially for oils

Flow sensors / flow meters

Specifically adjusted to oil for optimum measurement results

Volumetric flow quantities up to 200 l/min

Integrated temperature measurement and compensation

Pressure resistance up to 100 bar

No inlet and outlet pipe lengths required

Measured value transfer without conversion losses and easy setting via IO-Link

Multiple applications

Different media require different sensor characteristics. With the new mechatronic flow sensor, designed especially for oils, ifm provides the perfect combination of accuracy, speed and adaptability to the application. This also increases economic efficiency.

High performance

Due to a complex adjustment carried out during production and the use of oil-specific mechanical parts, the new sensor does not only provide precise measured values for the selected oil curve. It is also distinguished by an integrated temperature compensation. ifm also offers individually designed special units for particular oil viscosities.

Process connection and pressure rating	Order no.			Order no.			Order no.

Further viscosities and flow ranges on request!

Hydraulic application

Sensors for installation on the power pack

- 1) Level sensor + probe
- 2) Level sensor for point level detection
- 3) Mechatronic flow meter
- 4) Pressure sensor
- 5) Temperature sensor

Common technical data

Operating voltage	[V DC]	18...30
Current consumption	[mA]	< 50
Accuracy flow measurement		± 5 % of the final value*
Accuracy temperature measurement		3 K (25 °C; Q > 1 l/min)
Medium temperature	[°C]	up to 100
Protection rating, protection class		IP 65 / IP 67, III
Output 1		IO-Link, switching output, frequency output flow / temperature
Output 2		switching output, analogue output 4...20 mA flow / temperature

* Q > 1 l/min; 20...70 °C medium temperature

Accessories

Type	Description	Order no.
Installation		
	Label tag, PA	E30422
	Protective cover, PP	E30420
	Mounting plate for mechatronic flow sensors	EM0012
	USB IO-Link master for parameter setting and analysis of units Supported communication protocols: IO-Link (4.8, 38.4 and 230 kBit/s)	E30390

Connection technology

	Socket, M12, 2 m, black, PUR cable	EVC001
	Socket, M12, 5 m, black, PUR cable	EVC002
