

Condition monitoring systems

Free visualisation with 20 multicolour segments

Systems for signalling and indication

First-class visibility

Modern LED RGB technology –
long life, reduced stock-keeping

For flexible use as segment or
bar graph display

- ↻ Individual configuration of the
display modes
- ↻ Easy integration and control
via IO-Link

Individual process visualisation

In almost all installations, light towers serve as clearly visible display of machine and process conditions.

With 20 individually controllable segments, this light tower offers particularly great flexibility. On the one hand, segments can be combined into groups, allowing for 1 to 5-segment display. On the other hand, the 20 segments can also be used as a bar graph display for visualisation of analogue values, for example for clearly visible level indication on tanks or silos. In this operating mode, exceeded thresholds are clearly indicated in colour.

Some of the light towers also feature an integrated buzzer. In short, these versatile configurable light towers leave nothing to be desired.

Type	Mounting base	Buzzer	Order no.
	yes	–	DV2900
	yes	yes	DV2910
	–	–	DV2920
