

# OG Cube: photoelectric sensor in rectangular design with M18 thread

### **Photoelectric sensors**

Compact design with standard M18 thread for easy installation

High protection ratings and robust metal housing for harsh industrial environments

Long ranges for universal use

- Quick and easy setting of switch points via IO-Link
- Continuous measurement and monitoring of distances in the running process

### Photoelectric compact sensor for limited space

The compact rectangular housing is designed for use in applications with limited installation space. Thanks to the lateral M18 thread and the connector facing downwards, this type is ideally suited for use in conveying applications. The sensor achieves long ranges when detecting light or dark objects.

### Continuous distance measurement via IO-Link

ifm offers the new OG Cubes as diffuse reflection, retro-reflective and through-beam sensors. For the diffuse reflection sensors with background suppression, the ranges can be set via IO-Link and, similar to analogue sensors, the distance value is provided to the nearest millimetre. Besides, all versions feature varied setting options, such as light-on/dark-on mode or switch-on and switch-off delay for a fast set-up.

Type [H, W, D mm]	Range [mm]	Spot Ø at max. range* [mm]	Output H = light-on mode / D = dark-on mode***	Protection rating/ protection class	Ord n	der o.
